

## IMPROVED SECURITY MEASURES FOR PHARMACIES

There are a number of options for **improving** the security of both personnel and premises beyond the standard recommended security solutions. Our top 4 methods for **enhancing** security beyond standard systems are:

### Staff Duress Systems (Integrated CCTV, audio and alarms)

Removes members of staff from confrontational situations

Provides off-site "eyes and ears" to offer remote support and act upon the situation quickly.

Supplies a fast confirmed police response if required  
During opening and closing why not have additional eyes provide you with the comfort of knowing you are not alone?

### Controlled/Automated Opening and Closing

The only people with ability to provide access (open shutters/doors) and activate/ deactivate alarms are based in a secure off-site location.

Eliminates potential risks associated with 'key holder' being responsible for opening/closing the premises.  
Provides remote access control to secured areas such as high risk drug cabinets.

### Personal panic alarm with location tracking

Using technology similar to mobile phones, personal panic alarms are mobile

Covert activation ensures no additional risk or danger

Built in tracking to pinpoint location of personnel.  
'Lone worker' supervision.

### Access control – Biometric facial reader

Using a fast accurate facial recognition system

Hands free operation!

Open the door without the use of your hands

Reduce the risk of spreading germs  
Time & Attendance features

### The above measures will enhance and supplement the standard security precautions:

Install good quality locks on doors and windows

Install a monitored NSI approved intruder alarm controllable from an App

Keep access to money to a minimum by installing Safes with time locks & time delays with regular pick ups

Install an NSI approved IP CCTV system

Access control – restrict access to specific areas and keep control of all keys.

Cash till and EPOS/CCTV integration and I.T. server systems

Make sure the premises have good lighting inside and out

Provision of appropriate SIGNAGE.

### Services provided by <https://www.ess-security.co.uk> include:

Full risk evaluation survey

Intruder, Access Control, CCTV and Fire protection systems, including professional advice on siting, quality and capacity of fire and security equipment

Physical security systems including locks, bolts, external shuttering, grilles and bar solutions

Police monitoring including Intruder BS EN 50131 pd6662 grade 3 police response (Hold-up and Intruder) and CCTV surveillance BS 8418:2015, BE EN 50132-7:2012+ a1:3013

Compliance with local and national police and fire agency requirements

Perimeter vulnerabilities and protection including party wall assessment

Security and safety training related to security systems

Annual service and maintenance contracts

Security and Emergency lighting

Professional Keyholding services

Break-glass detection and protection

Remote CCTV monitoring

Dispensary and Consultation room panic and surveillance systems

Security including CCTV system signage
